Design Assist is a service that provides customers with maximum value through Optimized system design. Working with an existing project design or concept, Armstrong will reconfigure the system layout to deliver optimal system efficiency, complete owner/operator satisfaction and substantially reduced equipment and installation costs.

► The Challenge

The challenge for system designers is to optimize mechanical system efficiency and minimize cost and floor space requirements. Choosing to use standard components and designs may appear to remove reliability risks, but in fact introduces additional costs that are significant and frequently unseen. The use of advanced product technology and design practices can produce cost savings and system efficiencies that create value immediately and for the life of the building.

► Features

- Armstrong's Design Assist service uses a structured, disciplined methodology for redesigning system configurations for minimal floor space, minimal use of resources, and maximum efficiency. Comprised of seven steps, this service provides customers with an optimal design, based on in-depth knowledge of product and technology integration, and complete life cycle costs.
- Detailed equipment selections based on current industry data.
- Includes sub-assembly drawings and weight calculations.
- Includes a detailed report, cost analysis and 3D drawing.

► Benefits:

- Typically delivers savings on system components, floor space, piping, installation and energy efficiency.
- Armstrong's Design Assist service provides customers with the optimal system layout that lowers the first installed cost.
- Product selections are based on in-depth knowledge of component integration, and complete life cycle costs.
